Hi everyone, good morning! My name is **Sharon June**, and we are from **Team Brainova**. Joining me today are my team members **[Insert Name 1]** and **[Insert Name 2]**.

For our capstone project, we are focusing on automating and precision-grading the ripeness of **oil palm fresh fruit bunches**.

Currently, plantations lose massive revenue simply because workers judge fruit ripeness by eye. Harvesting a bunch just two to four weeks early cuts its oil value down to nearly **one-third**—and thousands of these decisions happen daily without any digital record.

To solve this, we created **PalmVision AI**. It uses instant mobile computer vision to grade ripeness directly in the field, logging GPS proof and timestamps **even without internet access**. Today, we will be sharing on how our system connects workers, supervisors, and management under one seamless record."
